API AutoCAD exposes its automation capabilities in the form of Application Programming Interfaces (APIs). These API's allow programmers to automate certain tasks within AutoCAD, provide access to certain functions and settings, as well as control the application's interactions with the user. Lisp The commands provided by AutoLISP are used for creating macros, scripts and extension blocks. AutoLISP is a script-based language created specifically for AutoCAD. With AutoLISP you can: create macros and extensions produce printable documentation create macros and extension blocks in a user-friendly format evaluate math expressions using AutoCAD commands script applications like AutoCAD AutoLISP features AutoLISP includes over 100 commands to automate your drawings, and even more if you add the free AutoLISP Advanced pack. The commands include: Align drawings Draw Duplicate drawing layer File dialog Find Import/export (export of selected objects) Lock/unlock drawings Move New paper size Open, close, name, and save drawings Orientation and scale changes Place, rotate, and scale objects Print Randomize Save picture as Set paper size Set properties Stop Subdivision of meshes Undo Vector draw Windows open dialog Visual LISP AutoCAD's object-oriented API is called the Visual LISP API and is used for creating custom menu actions, window actions, toolbars and any other custom application. To get started, you first have to make your own Visual LISP and save it in a location on the AutoCAD system. Then, you create a menu, a toolbar, a custom property, or any other object using a Visual LISP package. Visual LISP's features include: Access to all existing toolbars Add objects to a tool's context menu Create menus Create custom toolbars Create windows Create and add buttons Create custom properties Create custom visual styles Create custom menus Create dynamic property filters Determine the location of a window Update the visible status of a window Update the visible status of an object Write to a database Visual LISP's syntax is easy to learn and follows the standard procedure of object oriented programming. This allows for creating menus and objects that mimic the AutoCAD tools. Visual LISP's custom 5b5f913d15
